OpenClose, CCMC Partner to Connect Origination, Servicing Software
- LOS interface creates more efficient connection between LOS, Servicing Platforms -

WEST PALM BEACH, FLA., May 6, 2009 – [OpenClose](#)®, developers of Web-based, [end-to-end mortgage lending software](#), announced that it has partnered with CCMC Inc. (Altamonte Springs, Fla.) to implement its ccmcBridge® solution with OpenClose's LenderAssist™ [loan origination software](#) (LOS). The first implementation enables OpenClose users to book loans on the [Jack Henry & Associates](#)® loan servicing platform.

The interface provides OpenClose LenderAssist users an alternate method to manually entering loan data from loan origination to the loan servicing system, eliminating the need to reenter information. This is the first in a series of planned Bridgeware interfaces for the OpenClose AssistSeries™ suite.

“With the increase in home foreclosures and loan modifications, lenders need the most advanced technologies possible to respond to the increased need for accurate origination and refinance capabilities,” said J.P. Kelly, president of operations for OpenClose. “The ccmcBridge interface creates a new efficient approach to processing loans, which in turn supplies our customers with the most effective means to serve their borrowers.”

LenderAssist is a Web-based LOS that combines traditional mortgage banking capabilities with additional core lending tools, such as pipeline management, mortgage processing, underwriting, closing, secondary marketing, accounting, post-closing and imaging. The solution is one of four products that compose OpenClose's AssistSeries suite.

“Now LenderAssist users have the option to easily and accurately service their own loans,” said Dana Giesler, vice president of sales for CCMC. “By enabling consolidation of efforts and reducing errors naturally caused by re-keying data, ccmcBridge improves workflow. The end result is immediate improvement of operations and a direct benefit to the bottom line.”
